

**AUTHORIZATION AND INFORMED CONSENT FOR
PHOTOREFRACTIVE KERATECTOMY (PRK)
AT THE SAN DIEGO EYE BANK**

TO: _____
(Patient Name)

Your physician is: _____, M.D.

Date of Surgery: ____/____/____

I. Right to be Informed of Risks and Right to Consent to or Refuse PRK Procedure.

The San Diego Eye Bank (“Clinic”) and certain of its affiliates (“Affiliates”) maintain personnel, facilities and equipment to assist your physician in his or her performance of various surgical operations and other special diagnostic and therapeutic procedures, including Photorefractive Keratectomy (“PRK”). The PRK procedure that you have elected to undergo may involve risks of unsuccessful results, complications, injury, or even death, from both known and unforeseen causes, and no warranty or guaranty is made as to result or cure. You have the right to be informed of such risks as well as the nature and purpose of the PRK procedure and the available alternative methods of treatment. This form is not a substitute for such explanations, which are provided by the above named physician.

II. Performance of PRK Procedure.

Your physician has recommended the PRK procedure. PRK is a procedure in which a device called an excimer laser is used to reduce or eliminate nearsightedness, farsightedness and/or astigmatism. Upon you execution of this Authorization, the PRK procedure, together with any other procedures which, in the opinion of your physician, may be indicated due to an emergency, will be performed on you. The PRK procedure will be performed by the physician named above. Assistants, technicians and other persons in attendance during your PRK procedure may be employees of your physician, the Clinic and/or its Affiliates. All Clinic and Affiliate employees will, however, be acting pursuant to the express supervision and direction of your physician.

III. Patient Acknowledgment.

PRK is an elective procedure. By signing this Authorization, you acknowledge that you have been informed by your physician or surgeon of the possible risks, complications and side effect associated with the PRK procedure, including, without limitation, the following:

1. During the procedure, the excimer laser could malfunction, requiring that the procedure be stopped before completion. Depending on the type of malfunction, this may or may not be accompanied by visual loss.
2. You may experience increased sensitivity to light, haze, glare, and fluctuations in the sharpness of your vision. While these conditions usually only occur during the normal stabilization period from one to three months, they may also be permanent.

3. An overcorrection or undercorrection could occur, requiring future procedures or the use of glasses or contact lenses.
4. There may be a “balance” problem between your eyes if the procedure has been performed only on one eye.
5. You may experience discomfort and blurred vision following the procedure, and temporary glasses may be necessary while healing occurs.
6. Visual acuity gained from the procedure could regress, and your vision may go partially or completely back to the level it was immediately prior to undergoing the procedure.
7. Rare complications include inflammation of the cornea or iris, persistent corneal surface defect or scarring, infection, and irregular astigmatism causing distorted images.
8. If you are pregnant or nursing, the results of your procedure could be affected.
9. If you have PRK performed on both eyes at the same time or in an interval of less than one week and any of the above complications occur in one eye, they may also occur in the other. This could result in significant loss of vision or even temporary permanent legal blindness.

IV. “Off Label” PRK.

The FDA approval of the use of the excimer laser for PRK was based on correction of eyes within certain parameters. Any correction greater than approved parameters is deemed an “off-label” use of the excimer laser. If your myopia, hyperopia and/or astigmatism is greater than the amount approved for correction by the FDA, and you have nevertheless elected to have PRK performed on your eye(s), you will have an increased likelihood of experiencing glare and halos and may experience a residual amount of myopia, hyperopia and/or astigmatism. This may necessitate the use of glasses or contact lenses for better distance vision.

V. Patient Consent.

I have read this Authorization (or it has been read to me). The PRK procedure has been explained to me in terms that I fully understand, and I have had an opportunity to ask questions and receive satisfactory answers to any questions I have asked.

I have been informed about the possible benefits and possible complications, risks, and contraindications associated with the PRK procedure. I understand that it is impossible for my physician to inform me of every conceivable complication that may occur and that there may be unforeseen risks. I understand that no guarantee of a particular outcome was given that my vision

could become better or worse following treatment, and that complications or a poor outcome may manifest weeks, months, or even years after the procedure.

My decision to undertake this procedure was made without duress of any kind. I understand that this procedure is an elective procedure and my medical condition might be treated by alternative means, such as glasses, contact lenses, or other forms of refractive surgery.

I authorize the physician and other health care personnel involved in performing my procedure and in providing my pre-and post-procedure care to share with one another any information relating to my health, vision, or the procedure that they deem relevant to providing me with care. I also authorize my physician to use data about my procedure and subsequent treatment to further understand the procedure.

VI. Patient Authorization and Consent.

Your signature below constitutes your acknowledgment that:

1. You have read and agree to the foregoing;
2. The procedure set forth below has been adequately explained to you by your physician and that you have received all of the information you desire concerning such procedure; and
3. You authorize and consent to the performance of the procedure.

Description of the procedure: _____

Dated: _____, 20__

Time: _____ AM / PM

Patient or authorized representative: **PRINTED NAME**

Patient or authorized representative: **SIGNATURE**

(If signed by other than patient, indicate relationship: _____)

I have been offered a copy of this Authorization (please initial): _____
